DENSITY CURRENT BAFFLES

The next generation stamford density current baffles for
upgradation of primary & secondary clarifier

DENSITY CURRENT BAFFLES

Stamford Density Current Baffle (SB2.0) is an advanced baffle designed to improve the performance of the clarifier by a) substantially reducing clarifier effluent solids, b) increasing the clarifier's hydraulic capacity and c) promoting blanket formation. As an integral part of activated sludge clarifiers, Density Current Baffles meet or exceed industry standards for units commonly known as "Stamford", "Submerged Flow Deflection", or "Up flow" baffles. The custom-designed fiberglass baffles is to provide important value to water and wastewater operations by delivering:

LONG, RELIABLE SERVICE ON STAMFORD BAFFLES:

- Long service life for the baffle is ensured by FRP components with superior corrosion resistance and strength.
- Utilizing precision molding results in consistent, reliable quality and components custom molded to fit the contour of each clarifier

BAFFLES WITH EASY, LOW-COST INSTALLATION:

With simple, modular construction, installation is quick and easy. Lightweight components, with high strength to weight properties, are easy to handle and do not require special lifting equipment. Stainless steel or FRP support brackets are easily attached in the field by contractor to ensure proper installation. Only one bracket per panel is needed for most applications.

ADVANTAGES:

- Substantially reduces the clarifier effluent solids, Increases the
- clarifier's hydraulic capacity,
- Promotes the Quick Sludge blanket formation,
- Quick Installation.

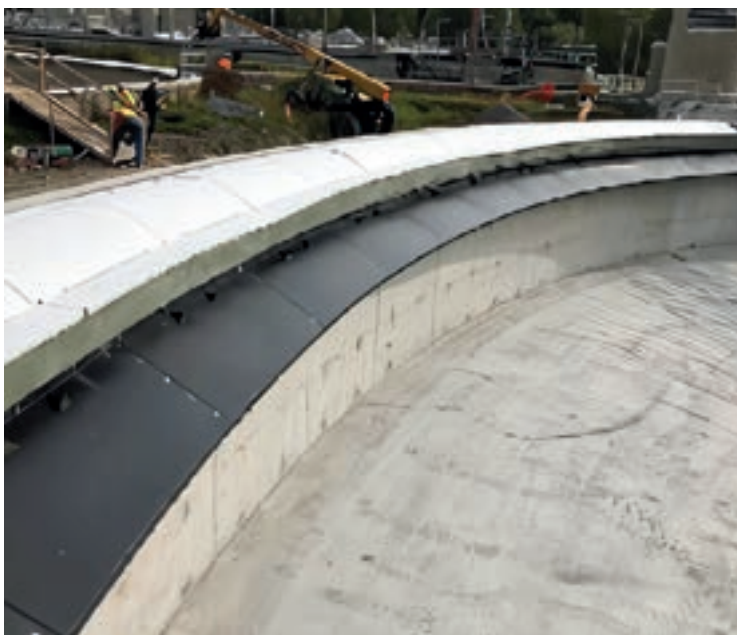

EUROTECK
ENVIRONMENTAL (P) LTD
LET'S RECYCLE

KEY FEATURES:

- Clarifier performance improvement
- Sustainability reduces the clarifier solids upto 80%
- Promotes the quick blanket formation
- Long service life
- Superior corrosion resistance and strength
- Quick installation
- Easy installation, light weight components

APPLICATIONS:

- ETP
- STP
- WTP Plants.
